

# VOSS AUDIO LAN CABLE CAT 6 FTP-4BC (305M/ROLL)

## Features:

- 1.Strong Interference Resistance:** The FTP (Foiled Twisted Pair) design uses a metal shielding layer that effectively reduces external electromagnetic interference (EMI) and radio frequency interference (RFI), ensuring stable signal transmission.
- 2.High-Quality Materials:** Made with 4 pairs of pure copper (4BC, Bare Copper) conductors, offering excellent conductivity and better signal transmission, which supports higher data transfer speeds.
- 3.Good Tensile Strength:** Our cables are designed with numerous fine wire strands, enhancing the overall flexibility and durability. Even if one wire strand is damaged, it is less likely to affect the overall performance, maintaining stable signal transmission.
- 4.High Transmission Speed:** CAT 6 cables support data transfer speeds up to 10Gbps, and can provide stable network performance up to 55 meters, making them ideal for gigabit network applications.
- 5.Versatile Applications:** Suitable for office, home, and industrial use, especially in environments that require interference resistance and high bandwidth.
